

To All Concerned:

The Mike Rose Soccer Complex has installed a Thor Guard lightning prediction system. This system warns of the possibility of lightning within a two mile radius of the Complex.

This is how it works:

*You will be warned by a **one** 15 second blast of the horn signaling suspension of activities and a strobe light will begin flashing and remain flashing until safe conditions return. You should immediately seek an appropriate, safe shelter. The most logical spot is the car.*

*You may resume activities only after **three** 5 second blast of the horn are sounded and the strobe light stops flashing. Again, the system only sends out the all clear when safe conditions return. The strobe light and horn are located on the stadium building (stadium parking lot side) and on the well house by the maintenance building. Also, there are posters attached to the bathrooms for public knowledge. If you remain outdoors after the warning is issued, you do so at your own risk.*

The system is active from 7 a.m. to 11 p.m, 7 days a week. This will take some getting use to but will take the human element out of making a decision on the field.

This was a very expensive system so... if you see anyone kicking a soccer ball or damaging the system in any way, please report this to management or security.

Please take the time to inform your players/club staff/referees/volunteers/out of town teams/parents/grandparents, etc. I do appreciate your cooperation.

*Thank you
Kim Talley
